

GoEco! in five steps

What you need to start with

Francesca Cellina, Dominik Bucher

1.

Install the *GoEco! Tracker* and *Moves* apps following the instructions the user guide www.goeco-project.ch, section «Get the app»

Always keep the two apps active in background

2.

Enable access to Wi-Fi networks
and, if you have it,
also enable Internet mobile data connection
(in particular if you have an Android phone)

3.

Keep the GPS device switched on

Battery consumptions will increase a bit

However, recharging the batteries
during the night is usually enough

for the phone to work properly the whole day

It is better not to activate «extreme» energy
saving modes: you won't risk to lose data

4.

You can forget about *Moves* (as long as it is active!) and only interact with *GoEco! Tracker*

Check your routes every day

Confirm the means of transport or correct them

5.

In case you don't want to record a specific route, you can simply turn *Moves* off for a while, keeping *GoEco! Tracker* switched on.

We would however prefer that you keep *Moves* always on: we guarantee to protect your privacy!

A few important remarks

With some smartphones using the Android
operating system,
GoEco! Tracker

only works with a Wi-Fi Internet connection
(Internet mobile connection is not enough)

Your routes will in any case always be
monitored, also where no Wi-Fi is available

If you go abroad, your routes are regularly tracked.

To avoid unplanned costs, you'd better
turn the international roaming data connection off

Unless it is really necessary,
we ask you not to press the
«*Leave GoEco! Tracker*» button:
you might forget to re-enter the app

Thank you for your attention!
